# RAW development

Rundzwei 2014

Option one - Towers and podiums

RAW areal in Berlin is a former train wagon workshop, now used as a club site, artist workshops, bars and galleries. At Rundzwei, we tried to articulate the club zone and separate the noise from it to allow living on the other side of site. Noise barrier is created with buildings with daytime usage, or landscape. We proposed more options that can be mixed together to fit specific part of the site, to maintain the character of RAW areal.

Option two - Urban village

Connections

Ant hill is a place that tries to enrich the site at Kocelova street, areal of our university. It stands above gates, made of plastic beer crates, but inside, what is not visible, are various things happening. There are spaces that are large enough to make a camp fire or dance, or so small that you will barely fit into them. In some you will have to crawl, in some nobody want you to go and it's too narrow.

Basic shape of the building is generated, but as long it is made out of beer crates, you can add how much you want, and take some aswell. There are new spaces for studios, exhibitions, leisure, although it is mostly a summer instalation, because of missing insulation, it can be equiped with water insulation from above. Minecraft is a suitable tool for editing and outsourcing design process, here used also for showing, how playful creating a space can be, with actual rational stress analysis result - you can make your own caves, and it's telling you, where to add and where you can remove crates.

Interactive building cubes proposal. Individual cubes have pressure sensors that control light coming out of it. Intensity of static pressure increases emitting light. Thanks to joints on each edge of cube, you can assemble it in any shape or structure, and instantly see which part of the structure needs to be supported, or on the other hand, is too dense. Similar model prototype was made.

Dendrite  
VŠVU 2012

Project brings a building technique, which is tested on VŠVU campus site at Drotárska cesta. It is a technique - nylon net strengthened by latex, that can be easily replaced with another adequate materials in different scale. With different models, testing, campus situations and problems we came to broad palette of types, mistakes, special behaviour of material, its tearing, transparency and other properties. There is a question, how to connect two and more cells together. We solved it by a trunk that connects same size trunk of the other cell. With that system, we can create a hierarchy. Cells have theirs specialisation, mainly for living, other for auditorium, lecture rooms, water-tower and canteen.

City studio  
VŠVU 2012

Structure designed for Námestie Slobody square is divided into three connected environments. It came from cooperation work of three projects. Underground part is made of rocky 3D printed elements. On its specific surface is poured water stream, so it allows regulation of temperature and humidity of environment. The lake in bottom is used for communication, along with communication system creating halls, bridges and spaces in the rocky elements.

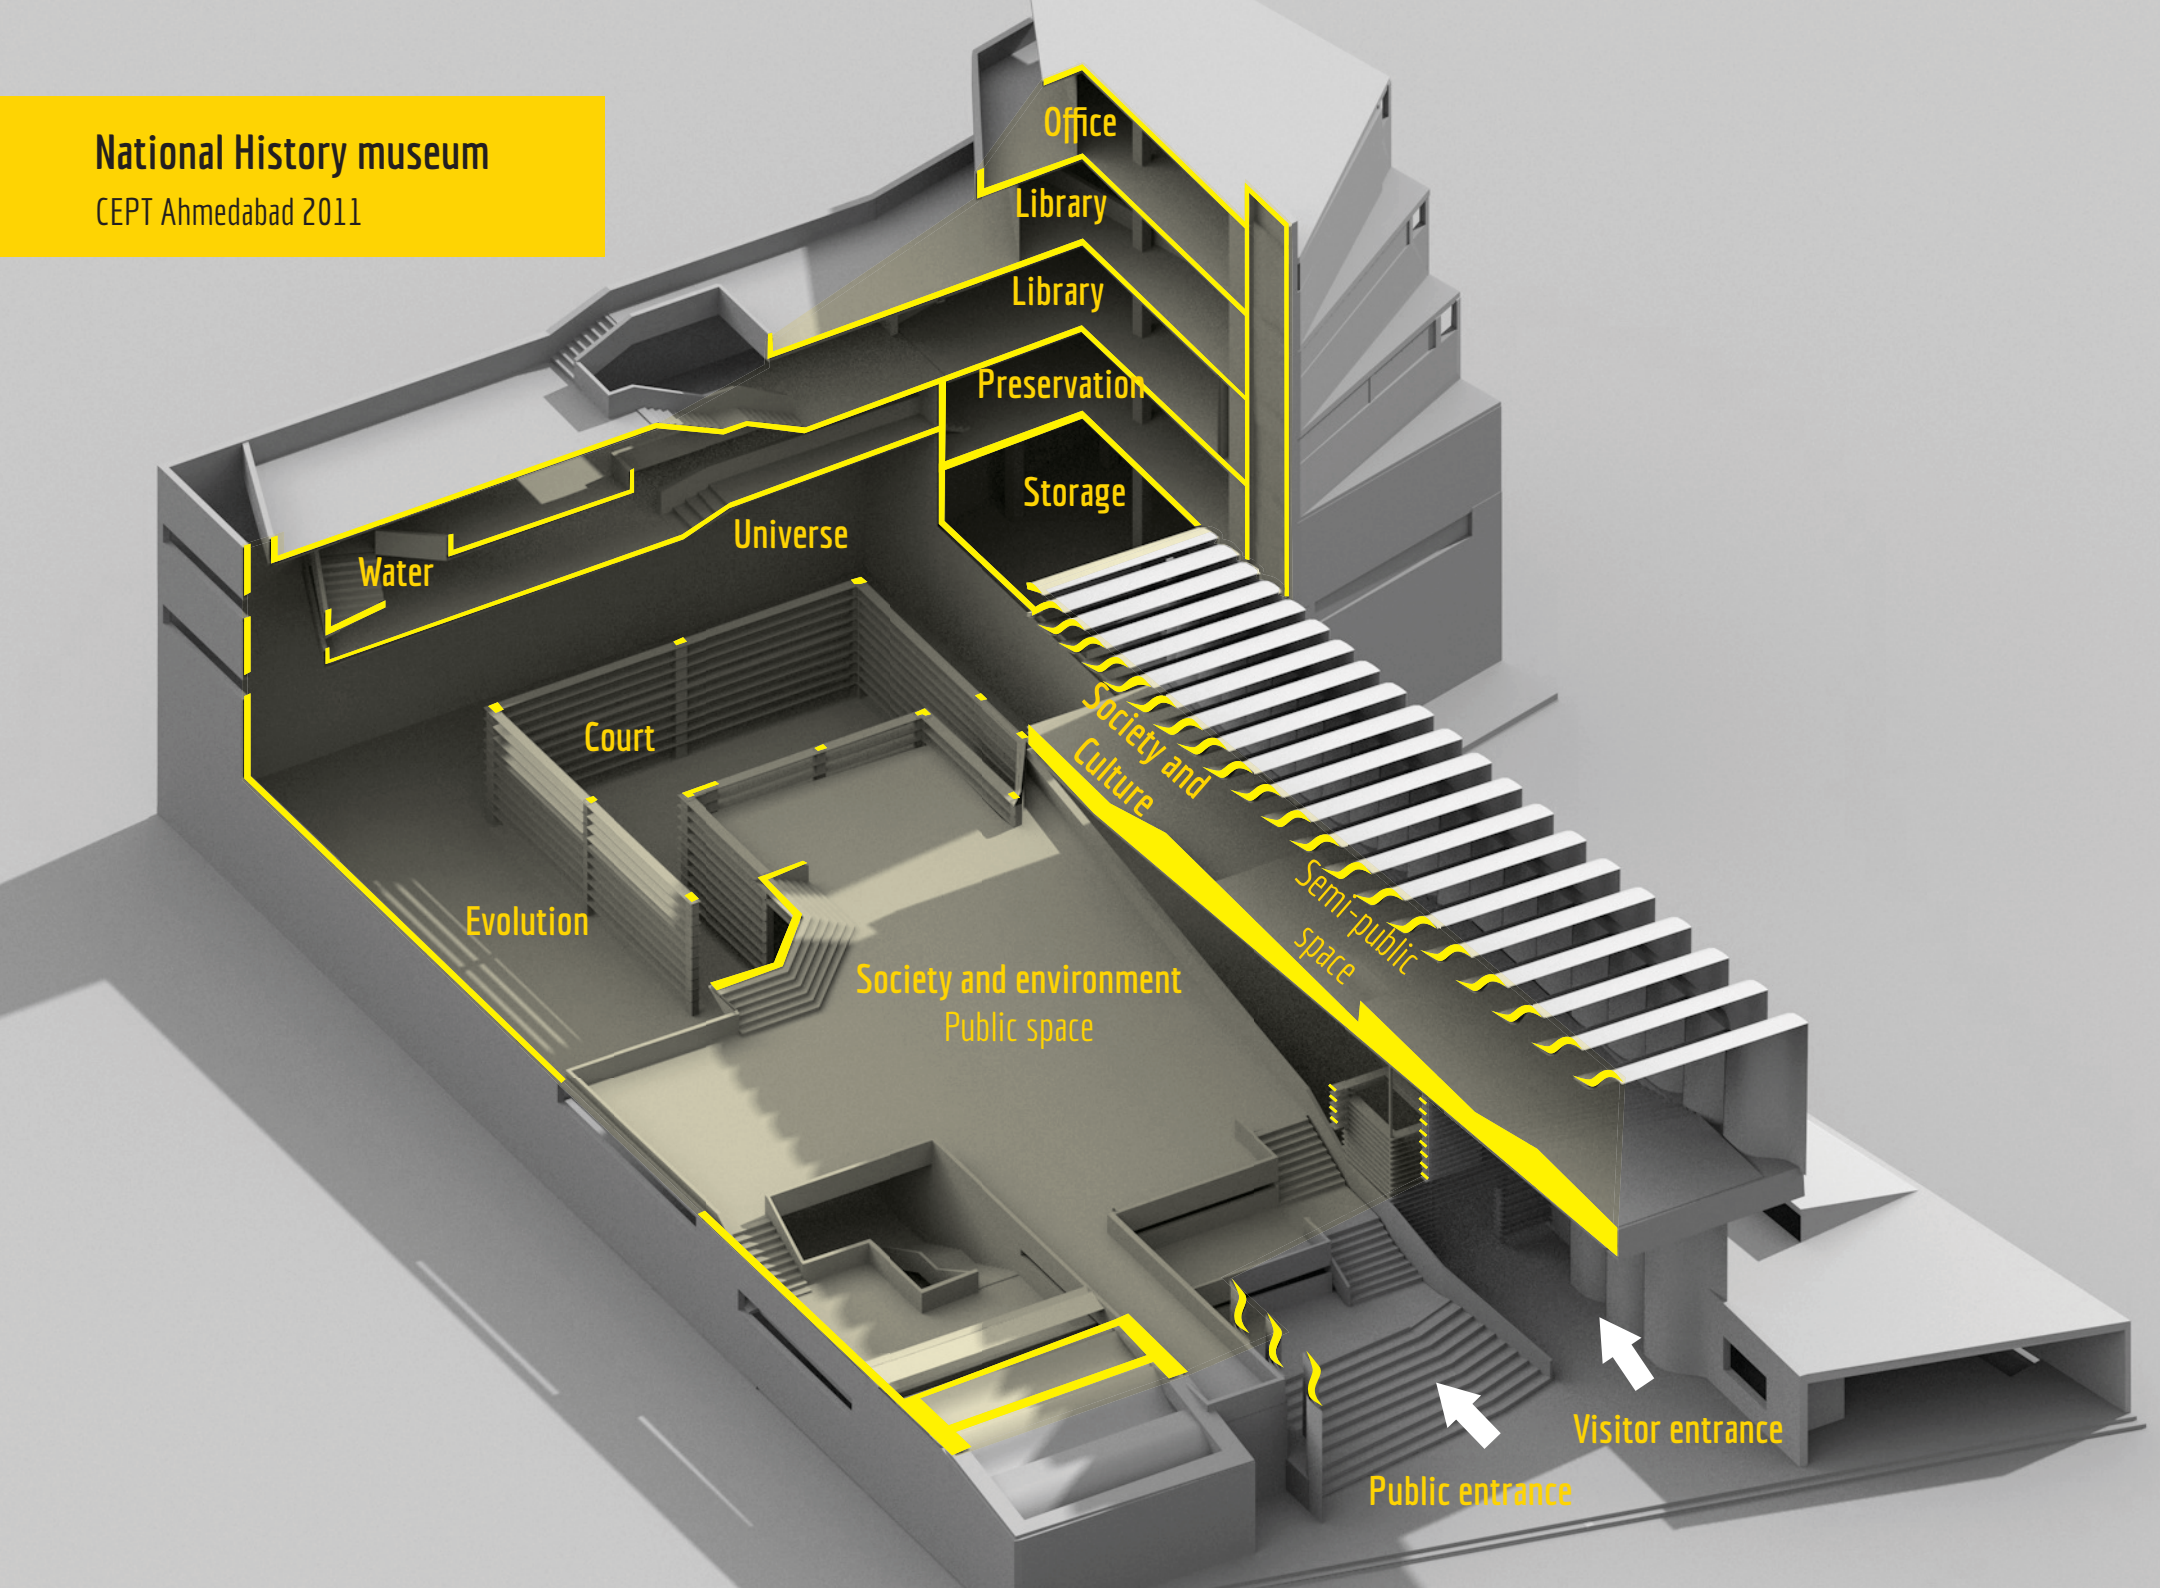

The underground part continues with upper construction part, which uses similar paths and spaces, but in different, open and light environment. Third project is dealing the properties of paths. The structure with specific atmosphere, binding with nature and regulated environment offers spaces for many events, activities, which are missing in the city center.

Grape festival 2012

## Urban bench

Bratislava 2012

First trial

After the first voluntarily build bench has been stolen, we decided to make a second, better. The tree provides great spot in the city, but whole square is without any bench.

Second trial

## CURRICULUM VITAE

1989	Born in Bratislava, Slovakia
2000-2008	Gymnázium Ladislava Novomeského
2008-2012	VŠVU/AFAD Architecture, Bachelor
2011	CEPT, Ahmedabad, India
2012-2014	VŠVU/AFAD Architecture, Master

## WORK

2008-2009	LL studio
2009-2011	Linwe/KRAFT
2012	EliteSolutions
2013	Institut for (X), Bureau Detours, [DK] NICE Architects [SK] WK team [SK]
2014	Rundzwei Architekten [DE]
2015	anOtherArchitect [DE]

## SKILLS PROGRAMS

Cinema 4D, AutoCAD, Illustrator, Photoshop, InDesign, SketchUp,  
Grasshopper, Pepakura, Vegas, Rhinoceros, ZBrush, 3DsMax

## LANGUAGES

English, German, HTML, CSS,
